PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with 3.5+ years of hands-on experience architecting and deploying scalable microservices-based systems. Expert in designing cloud-native solutions using Quarkus, Spring Boot, and modern frontend frameworks (Angular, React) across AWS and GCP. Proven track record delivering enterprise-grade applications handling 2M+ daily transactions with 99.95% uptime SLA. Specialist in high-performance REST/GraphQL APIs, reactive programming patterns, and end-to-end enterprise migrations. Passionate about optimizing system performance, enhancing data quality, and implementing CI/CD best practices in Agile environments.

CORE COMPETENCIES

Microservices Architecture | Cloud-Native Development | REST/GraphQL API Design | Database Optimization | Event-Driven Systems | CI/CD Automation | Distributed Systems | Performance Optimization | Reactive Programming | Domain-Driven Design | Full-Stack Development | Agile/Scrum Methodologies | Enterprise-Scale Migrations | System Design | Serverless Computing

PROFESSIONAL EXPERIENCE

Full Stack Developer | BMW Tech Works India, Pune | June 2025 – Present

- Architecting enterprise-scale Importer Prognose Tool for global import forecasting and analytics platform using Quarkus-based microservices and Angular frontend, processing large-volume datasets with optimized query performance.
- Engineering scalable RESTful APIs with cloud-native data pipelines integrated with PostgreSQL; implementing reactive programming patterns using Mutiny and RxJS for high-performance, event-driven data flows.
- Optimizing application performance by 35% through advanced caching strategies, domain-driven design (DDD) patterns, and modular architecture; integrated ML-based predictive models, enhancing decision-making accuracy by 25%.
- Establishing quality standards through comprehensive code reviews and test automation (JUnit, Jasmine, Karma), achieving 85%+ code coverage and reducing defect escape rates.
- Driving Agile development practices within Scrum framework; leveraging JIRA for sprint management, GitLab CI/CD for automated deployments, and Docker containerization for consistent environments across development and production.

Full Stack Developer | IBM, Pune | June 2022 – May 2025 (3 Years)

Fabric.ai Integration for Bestseller India (Jan 2025 – May 2025)

- Led end-to-end integration of Fabric.ai platform into enterprise infrastructure, designing cloud-native architecture for streamlined data ingestion and real-time processing workflows.
- Implemented secure, scalable GCP API Gateway solution centralizing API management across 15+ microservices, enhancing security posture and reducing latency by 30%.
- Developed serverless Cloud Functions in Python for event-driven data transformations, processing 100K+ records daily with 99.9% reliability; implemented robust error handling and monitoring.
- Architected hybrid storage solution combining Cloud Filestore and Google Cloud Storage (GCS), optimizing infrastructure costs by 40% while maintaining sub-second retrieval times.
- Built robust ETL pipelines using Pandas and NumPy for data cleansing, transformation, and analytics, improving overall data quality scores by 35%.

FASTAG Migration for HDFC Bank (Jan 2024 – Dec 2024)

- Spearheaded critical migration of legacy C# monolith to modern Java microservices architecture, serving 2M+ daily transactions with zero downtime during transition and full backward compatibility.
- Engineered high-performance backend using Quarkus framework, achieving 50% reduction in response times and 3x throughput improvement compared to legacy system; implemented comprehensive load testing.
- Collaborated with frontend engineers to deliver intuitive Flutter Flow interfaces, reducing user task completion time by 45% and enhancing overall user experience significantly.
- Orchestrated seamless PostgreSQL database migration including schema redesign, data validation, performance tuning, and rollback procedures, ensuring 100% data integrity with zero data loss.
- Implemented RabbitMQ message broker for asynchronous microservices communication, improving system resilience, enabling horizontal scaling, and reducing coupling between services.
- Redesigned API architecture with comprehensive error handling, circuit breakers, and monitoring, achieving 99.95% uptime SLA and reducing incident response time by 70%.

Common Test Platform for AT&T (Aug 2023 – Dec 2023)

- Transformed manual testing processes to fully automated framework using REST Assured, JUnit, and Drools, reducing testing cycle time by 65% and increasing release velocity.
- Improved test coverage from 45% to 85%, significantly enhancing defect detection rates by 30% and catching critical issues earlier in the development cycle.
- Automated complex provisioning workflows using Bash scripting and Jenkins, eliminating 200+ hours of monthly manual effort and reducing human error.
- Established CI/CD best practices and comprehensive regression test suites, catching 95% of defects pre-production and improving overall code quality.

API Development & Support for Horizon BCBS (Sep 2022 – Jul 2023)

- Managed mission-critical healthcare APIs processing 500K+ daily requests, implementing comprehensive monitoring, optimization strategies, and performance analytics.
- Achieved 99% reduction in production failures (from 150+ to <2 daily errors) through systematic debugging, refactoring, enhanced error handling, and proactive monitoring.
- Optimized API performance through intelligent caching strategies, query optimization, load balancing, and resource pooling, improving average response time by 60%.
- Built scalable microservices architecture using Spring Boot, Apache Kafka, and MongoDB, supporting 10x traffic growth without infrastructure expansion or performance degradation.
- Implemented real-time monitoring dashboards using Splunk, enabling proactive issue resolution, reducing MTTR (Mean Time To Resolution) by 70%, and improving SLA compliance.
- Collaborated with frontend teams on Angular/React integration, enhancing user experience, reducing client-side errors by 80%, and improving API usability scores.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, TypeScript, Bash

Frontend Frameworks & Libraries: Angular (RxJS, NgRx), React (Redux, Hooks), Flutter Flow, HTML5, CSS3, Material Design

Backend Frameworks: Spring Boot, Quarkus, Node.js, FastAPI, Django, Flask

Database Technologies: PostgreSQL, MongoDB, MySQL, Google BigQuery, Oracle

Cloud Platforms & Services: AWS (Lambda, S3, EC2, RDS), Google Cloud Platform (Cloud Functions, API Gateway, GCS, Cloud Filestore), Microsoft Azure (Functions, App Service, Blob Storage)

DevOps & Containerization: Docker, Kubernetes, Jenkins, GitLab CI/CD, Git, Bitbucket, GitFlow

Messaging & Event Streaming: RabbitMQ, Apache Kafka, Google Cloud Pub/Sub

Monitoring & Logging: Splunk, ELK Stack (Kibana), ServiceNow, Prometheus, Grafana

Testing & Quality Assurance: JUnit, TestNG, REST Assured, Jasmine, Karma, Postman, Swagger, Load Testing

Development Tools & Practices: JIRA, Confluence, Agile/Scrum, Domain-Driven Design (DDD), Microservices Architecture, Reactive Programming

EDUCATION

Bachelor of Engineering – Electronics & Communication (Minor: Computer Science)

Shri Ramdeobaba College of Engineering and Management, Nagpur, Maharashtra | Graduation: May 2022 | CGPA: 8.35/10

CERTIFICATIONS & CREDENTIALS

- AWS Certified Developer – Associate
- AWS Certified Cloud Practitioner
- Google Cloud Digital Leader
- Microsoft Certified: Azure Fundamentals

ACADEMIC PROJECTS & INITIATIVES

Smart Saline System with Message Alert: IoT-based healthcare monitoring system using Flash, MQTT protocol, Arduino microcontroller, and MySQL database for real-time patient vital tracking and automated alert notifications.

Smart Door Lock with ML Authentication: Computer vision-based security system leveraging TensorFlow, OpenCV, and Python for advanced facial recognition and intelligent access control.
